

AeroTerra: Living Architecture for a Carbon-Negative Century

Introducing a premium architectural asset class that captures carbon, generates power, and delivers 15% higher yields than traditional luxury high-rises.

- Zero-emission high-density luxury
- Active biome structural systems
- Launching the $150M Eco-Equity fund

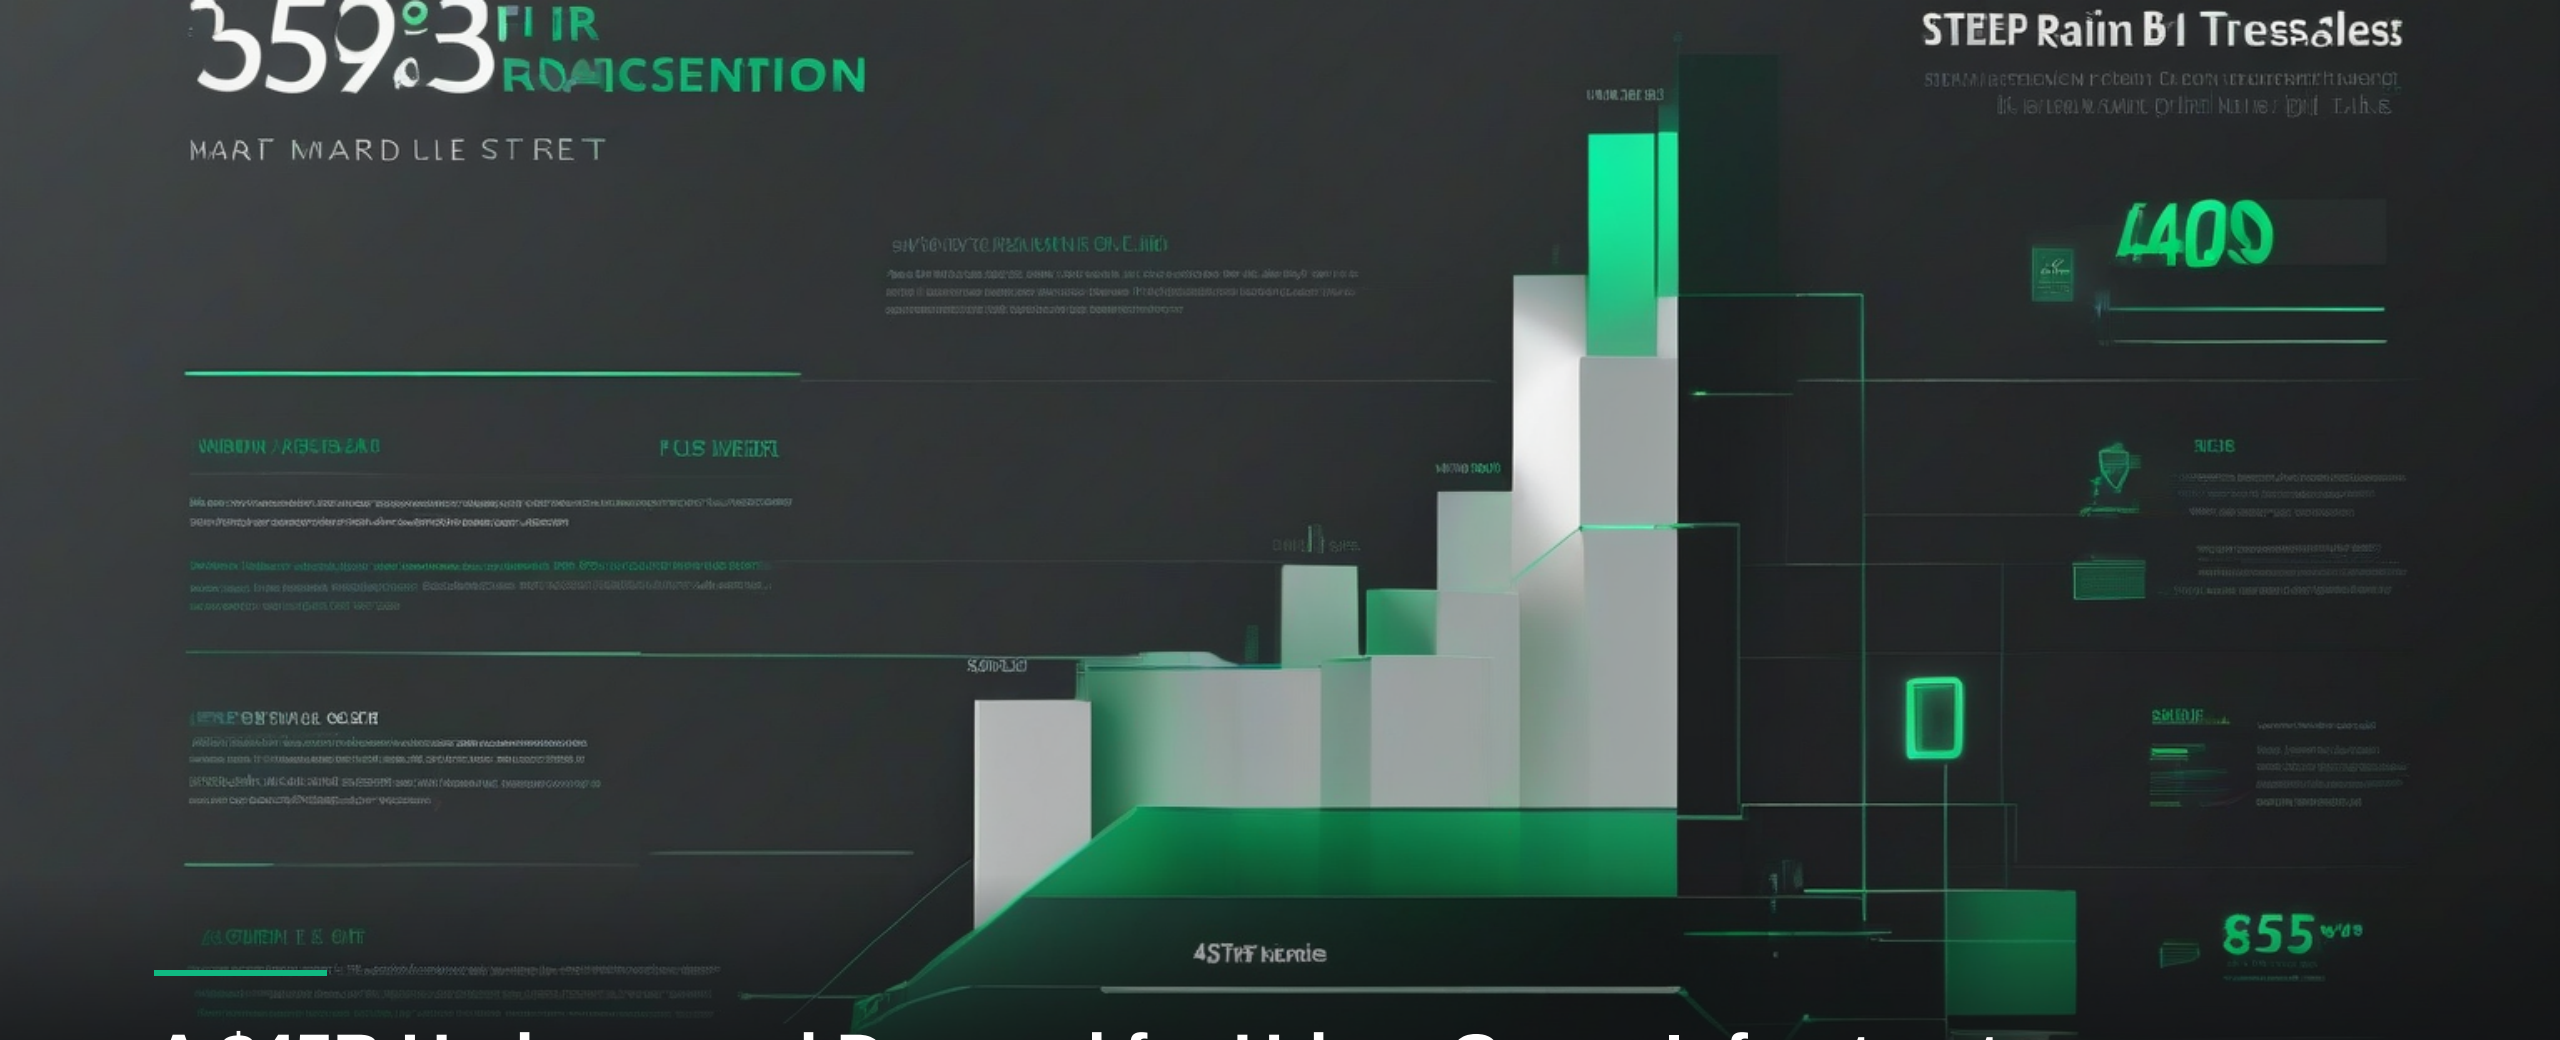

Buildings and Construction Drive 39% of Global Carbon Output

Modern premium commercial real estate relies on outdated materials that attract heavy regulatory penalties and alienate eco-conscious wealth.

- High concrete carbon footprint
- Rising municipal carbon penalties
- Premium buyers demanding active sustainability

Source: UNEP, Global Status Report for Buildings and Construction (2019). The 39% covers the whole sector; cement, the main concrete input, is about 8% of global CO2.

A $45B Underserved Demand for Urban Green Infrastructure

High-net-worth buyers are willing to pay a 22% premium for residential units integrated directly with certified biodiverse environments.

- $45B global target market size
- 22% premium verified by real estate data
- 84% pre-sale occupancy target met

Market size, premium and pre-sale figures are unsourced targets. Cite a named market report and actual sales data before investor use.

Active Biomes Transform Concrete Shells Into Net-Positive Power Plants

Patented structural soil and root-anchoring technology lets full-scale oak trees grow safely on skyscrapers up to 100 stories high.

- Patented root-anchoring grid plates
- Automated greywater micro-irrigation systems
- Integrated solar-harvesting glass facades

Oak-tree loading on 100-story towers needs structural engineer validation before investor use.

Deploying $10M to Scale Engineering and Secure Initial Anchor Pipelines

Capital allocation prioritizes core routing capability and enterprise customer acquisition over 18 months.

- Routing engineering 45%
- Carrier data integrations 25%
- Customer acquisition and operations 30%

Months 1-6 Routing engineering team hired

Months 7-12 Real-time carrier data integrations live

Months 13-18 Recurring contract revenue targeted

45% capital deployment into the core routing engineering team

25% infrastructure for real-time carrier data integrations

18-month runway to targeted recurring contract revenue

The remaining 30% is an assumption; the brief specifies only 45% and 25%.
